Hiring Manager
Catchpoint
India

Dear Hiring Manager,

I am writing to express my interest in the Systems Engineer I position at Catchpoint, as advertised. With a strong academic background in Computer Science & Networking and practical experience in troubleshooting Linux server issues and network infrastructure, I am enthusiastic about the opportunity to contribute to your team.

My educational journey at the Indian Institute of Technology Madras has provided me with a solid foundation in computer science principles and networking fundamentals. I have honed my skills in troubleshooting remote access issues, Linux server administration, and network diagnostics, which I believe align well with the responsibilities outlined in the job description.

During my tenure as a ML Engineer Intern at FN MathLogic Consulting Services, I gained hands-on experience in developing conversational question answering systems using Large Language Models (LLMs) and document parsing for question answering. These experiences honed my skills in software development, including frontend interaction, backend implementation, and utilization of various frameworks and platforms.

I am particularly drawn to Catchpoint's mission of increasing Internet resilience and providing unparalleled observability into website performance, applications, and APIs. I am eager to leverage my skills and knowledge to contribute to the success of Catchpoint's global infrastructure and services.

Enclosed is my resume, which provides additional details about my academic background and professional experience. I am excited about the opportunity to join the Catchpoint team and contribute to its mission of ensuring Internet resilience for top online retailers, Global2000 companies, and cloud service providers.

Thank you for considering my application. I look forward to the possibility of discussing how my skills and experiences align with your needs further.

Warm regards,
Harsh Sagar
